

e-Protect 5th Newsletter

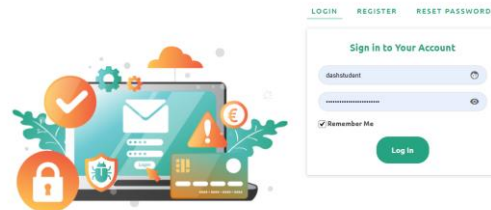

Are you ready for some action? The e-Protect eLearning platform is coming soon...!

The e-Protect Learning Space

Within the spirit of remote and online learning, the e-Protect project consortium is developing an e-learning space that will present content specifically related to the internet safety skills for the elderly.

This platform is being designed for professionals working with the target group of elderly people (65+) or related institutions, policy makers, experts in the field of education, researchers etc. The user interface is also meant to support easy-to-navigate features, such as easy access to search and updates and simple navigation. More importantly, the e-Protect online space will support dissemination of the project's activities and deliverables and will ensure that consumer and data protection requirements are known and are taken into account in defining and implementing EU training courses for the elderly.

Specifically, the e-learning space will serve as a one-stop-shop providing instant access to the full suite of digital learning resources developed in this project. The rich informational material will be freely available online for everyone interested in learning more about internet safety for the elderly and will include the following: The Competency Scale for consumer and data protection, the e-Protect Curricula for Internet Safety for the elderly, the e-Protect Train-the-Trainer Toolkit for adult educators, and the national reports from the Training programme implementation in each country.

It is noted that the learning space is being developed with gamified characteristics to make user activity more engaging, motivating and appealing to users. Last, the platform will be translated in each partner language: English, Greek, French, and German.

Get in touch with us

If you are interested in learning more about internet safety for the elderly and the project's activities, get in touch with us by completing this [form](#).
